

EQIPP: Immunizations (Track: 19-23 months)

Patient name: _____

Directions: Use this tool for the next 20 charts of 19-23 month patients seen in your office.

The ages of 19-23 months were chosen to align with National Immunization Survey (NIS) data for benchmarking. While the NIS examines the immunization status of children up to 35 months, the AAP opted to choose a lower age limit. This is to help identify areas in practice that could be improved and lead to fewer missed opportunities. Children have the opportunity to finish the primary vaccination series by 18 months.

NOTE: EQIPP does not record any patient identifying information. You may enter it here for your own record-keeping purposes. No one sees these results but you. This chart review is not punitive. What you, the user, choose to do with the results is up to you. Critically examine your office's immunization practices and make changes to improve your immunization rates.

		Yes	No	Unable, due to parent refusal	Unable, due to vaccine shortage, acceptable medical contraindications
1.	Does an easily accessible immunization record exist in the patient's medical record?				
2.	Has the patient completed the Hepatitis B vaccine series (3 doses)?				
3.	Has the patient completed the Rotavirus vaccine series (3 doses of Rotateq, or 2 doses)				
4.	Has the patient received the following DTaP vaccine doses?				
	4a. 1 dose DTaP				
	If yes to 4a: 4b. 2 doses DTaP				
	If yes to 4b: 4c. 3 doses DTaP				
	If yes to 4c: 4d. 4 doses DTaP				
5.	Has the patient completed the Hib vaccine series (>3 doses)				
6.	Has the patient received the following PCV vaccine doses?				
	6a. 1 dose PCV				
	If yes to 6a: 6b. 2 doses PCV				
	If yes to 6b: 6c. 3 doses PCV				
	If yes to 6c: 6d. 4 doses PCV				
7.	Has the patient completed the IPV vaccine series (3 doses)				
8.	Has the patient received the Influenza vaccine in the past 12 "				
9.	Has the patient received at least 1 dose of the MMR vaccine series				
10.	Has the patient completed the Varicella vaccine series (at least 1 dose or evidence of immunity)?				
11.	Has the patient received the following Hepatitis A vaccine doses?				
	11a. 1 dose Hepatitis A				
	If yes to 11a: 11b. 2 doses Hepatitis A				

Appendix

Hepatitis A:

Some users cite that 2 doses of Hepatitis A might not be completed by 19 months of age. This is true. The recommendation schedule states that 2 doses should be completed by 23 months. In identifying this as a gap, we ask practices to see if opportunities are being missed by delaying receipt of that vaccine to later ages. Are children coming in at 12 and 15 but not 18 months and missing that vaccine?
