FIGURE 3-4a. CLASSIFYING ASTHMA SEVERITY IN CHILDREN 0-4 YEARS OF AGE

 Classifying severity in children who are not currently taking long-term control medication.

Components of Severity		Classification of Asthma Severity (Children 0–4 years of age)				
			Persistent			
		Intermittent	Mild	Moderate	Severe	
Impairment	Symptoms	≤2 days/week	>2 days/week but not daily	Daily	Throughout the day	
	Nighttime awakenings	0	1–2x/month	3-4x/month	>1x/week	
	Short-acting beta ₂ -agonist use for symptom control (not prevention of EIB)	≤2 days/week	>2 days/week but not daily	Daily	Several times pe day	
	Interference with normal activity	None	Minor limitation	Some limitation	Extremely limited	
Dick	Exacerbations	0–1/year	≥2 exacerbations in 6 months requiring oral steroids, or ≥4 wheezing episodes/1 year lasting >1 day AND risk factors for persistent asthma			
	systemic corticosteroids	Consid Fre	Consider severity and interval since last exacerbation. Frequency and severity may fluctuate over time.			
		Exacerbations of any severity may occur in patients in any severity category				

- Level of severity is determined by both impairment and risk. Assess impairment domain by caregiver's recall of previous 2–4 weeks. Assign severity to the most severe category in which any feature occurs.
- At present, there are inadequate data to correspond frequencies of exacerbations with different levels of asthma severity. For treatment purposes, patients who had ≥2 exacerbations requiring oral corticosteroids in the past 6 months, or ≥4 wheezing episodes in the past year, and who have risk factors for persistent asthma may be considered the same as patients who have persistent asthma, even in the absence of impairment levels consistent with persistent asthma.
- Classifying severity in patients after asthma becomes well controlled, by lowest level of treatment required to maintain control.*

	Classification of Asthma Severity			
Lowest level of treatment required to maintain control (See figure 4–1a for treatment steps.)	Intermittent	Persistent		
		Mild	Moderate	Severe
	Step 1	Step 2	Step 3 or 4	Step 5 or 6

Key: EIB, exercise-induced bronchospasm

*Notes:

For population-based evaluations, clinical research, or characterization of a patient's overall asthma severity after control is achieved. For clinical management, the focus is on monitoring the level of control (See figure 3–5a.), not the level of severity, once treatment is established.

See figure 3–5a for definition of asthma control.

FIGURE 3-4b. CLASSIFYING ASTHMA SEVERITY IN CHILDREN 5-11 YEARS OF AGE

 Classifying severity in children who are not currently taking long-term control medication.

Components of Severity		Classification of Asthma Severity (Children 5–11 years of age)				
		1	Persistent			
		Intermittent	Mild	Moderate	Severe	
	Symptoms	≤2 days/week	>2 days/week but not daily	Daily	Throughout the day	
	Nighttime awakenings	≤2x/month	3-4x/month	>1x/week but not nightly	Often 7x/week	
Impairment	Short-acting beta ₂ -agonist use for symptom control (not prevention of EIB)	≤2 days/week	>2 days/week but not daily	Daily	Several time per day	
	Interference with normal activity	None	Minor limitation	Some limitation	Extremely limited	
	Lung function	Normal FEV ₁ between exacerbations EEV ₁ >80%	• FEV. = >80%	• FEV ₁ = 60-80%	• FEV. <60%	
	Lung function	predicted	predicted	predicted	predicted	
		• FEV ₁ /FVC >85%	• FEV ₁ /FVC >80%	• FEV ₁ /FVC = 75-80%	• FEV ₁ /FVC <75%	
	Exacerbations requiring oral systemic	0–1/year (see note)	e note) ≥2 in 1 year (see note)			
Risk		Consider severity and interval since last exacerbation. Frequency and severity may fluctuate over time for patients in any severity category.				
	corticosteroids	Relative annu	Relative annual risk of exacerbations may be related to FEV,			

- Level of severity is determined by both impairment and risk. Assess impairment domain by patient's/caregiver's recall of the previous 2–4 weeks and spirometry. Assign severity to the most severe category in which any feature occurs.
- At present, there are inadequate data to correspond frequencies of exacerbations with different levels of asthma severity. In general, more frequent and intense exacerbations (e.g., requiring urgent, unscheduled care, hospitalization, or ICU admission) indicate greater underlying disease severity. For treatment purposes, patients who had ≥2 exacerbations requiring oral systemic corticosteroids in the past year may be considered the same as patients who have persistent asthma, even in the absence of impairment levels consistent with persistent asthma.
- Classifying severity in patients after asthma becomes well controlled, by lowest level of treatment required to maintain control.*

	Classification of Asthma Severity			
Lowest level of	Intermittent	Persistent		
to maintain control		Mild	Moderate	Severe
(See figure 4–1b for treatment steps.)	Step 1	Step 2	Step 3 or 4	Step 5 or 6

Key: EIB, exercise-induced bronchospasm; FEV₁, forced expiratory volume in second; FVC, forced vital capacity; ICU, intensive care unit

*Notes:

For population-based evaluations, clinical research, or characterization of a patient's overall asthma severity after control is achieved. For clinical management, the focus is on monitoring the level of control (See figure 3–5b.), not the level of severity, once treatment is established.

See figure 3–5b for definition of asthma control.

FIGURE 3-4c. CLASSIFYING ASTHMA SEVERITY IN YOUTHS \geq 12 YEARS OF AGE AND ADULTS

 Classifying severity for patients who are not currently taking long-term control medications.

Components of Severity		Classification of Asthma Severity (Youths ≥12 years of age and adults)				
			Persistent			
		Intermittent	Mild	Moderate	Severe	
Impairment Normal FEV ₁ /FVC: 8–19 yr 85% 20 –39 yr 80% 40 –59 yr 75% 60 –80 yr 70%	Symptoms	≤2 days/week	>2 days/week but not daily	Daily	Throughout the day	
	Nighttime awakenings	≤2x/month	3-4x/month	>1x/week but not nightly	Often 7x/week	
	Short-acting beta ₂ -agonist use for symptom control (not prevention of EIB)	≤2 days/week	>2 days/week but not >1x/day	Daily	Several times per day	
	Interference with normal activity	None	Minor limitation	Some limitation	Extremely limited	
		Normal FEV ₁ between exacerbations				
	Lung function	 FEV₁ >80% predicted 	 FEV₁≥80% predicted 	• FEV ₁ >60% but <80% predicted	 FEV₁ <60% predicted 	
		 FEV₁/FVC normal 	 FEV₁/FVC normal 	 FEV₁/FVC reduced 5% 	 FEV₁/FVC reduced >5% 	
Risk	Exacerbations requiring oral systemic corticosteroids	0–1/year (see note)	≥2/year (see note)			
		Consider severity and interval since last exacerbation. Frequency and severity may fluctuate over time for patients in any severity category.				
		Relative	annual risk of exac	erbations may be rela	ted to FEV ₁	

Level of severity is determined by assessment of both impairment and risk. Assess impairment domain by patient's/caregiver's recall of previous 2–4 weeks and spirometry. Assign severity to the most severe category in which any feature occurs.

■ At present, there are inadequate data to correspond frequencies of exacerbations with different levels of asthma severity. In general, more frequent and intense exacerbations (e.g., requiring urgent, unscheduled care, hospitalization, or ICU admission) indicate greater underlying disease severity. For treatment purposes, patients who had ≥2 exacerbations requiring oral systemic corticosteroids in the past year may be considered the same as patients who have persistent asthma, even in the absence of impairment levels consistent with persistent asthma.

Classifying severity in patients after asthma becomes well controlled, by lowest level of treatment required to maintain control.*

	Classification of Asthma Severity			
Lowest level of	Intermittent	Persistent		
treatment required to maintain control		Mild	Moderate	Severe
(See figure 4–5 for treatment steps.)	Step 1	Step 2	Step 3 or 4	Step 5 or 6

Key: EIB, exercise-induced bronchospasm; FEV₁, forced expiratory volume in 1 second; FVC, forced vital capacity; ICU, intensive care unit

*Notes:

- For population-based evaluations, clinical research, or characterization of a patient's overall asthma severity after control is achieved. For clinical management, the focus is on monitoring the level of control (See figure 3–5c.), not the level of severity, once treatment is established.
- See figure 3–5c for definition of asthma control.
